

Licences Module

Summary

The Insight Licences module provides powerful facilities which enable all the co-ordination, control, safety, network planning and financial issues that surround licence applications to be managed effectively.

All types of licence can be accommodated by the system and a comprehensive range of parameter options are provided.

User-definable proforma documents, charging options, and time-scales, for each type of licence, ensure that all varying requirements can be met.

Sophisticated methods for specifying the basis of charging for licences are provided, including combinations of fixed charges, charges based on sizes and dimensions, charges based on time periods, extension charges, etc.

Invoices for charges due, can be raised immediately, or as a batch process, to either the applicant or hire company involved.

Comprehensive facilities for recording, withholding and returning deposits are also provided.

Where an applicant may require more time than on the initial application request, licence extensions can be accommodated, along with any associated charging implications.

A sophisticated inspection prompting system enables technicians to check and record that the licensee is compliant with the terms of the licence agreement and/or that the site has been left in an acceptable condition prior to the release of the deposit.

Under the Traffic Management Act, and in Scotland The Transport (Scotland) Act, onus is placed on Local Authorities to record Highway/Road based licences on the Street/Road Works Register.

An optional interface is available to seamlessly integrate these areas within Insight.

Key Features

All forms of licence applications accommodated (skips, scaffolding, hoardings etc.)

Quick and intuitive data entry screens

Extensive range of search/enquiry screens

Facilities to store data relating to types/dimensions of entities for which licences are being issued

Comprehensive financial management features covering:

- Deposits
- Fees
- Invoices
- Payments
- Receipts

Full Inspection prompting and recording facilities

High quality document production for standard proformas and ad-hoc documents

Integrated co-ordination of licences with Authorities own works, NSG Designation Data and Utility Street Works

GIS/Map based co-ordination and plotting features

Embedded Crystal Reporting facilities

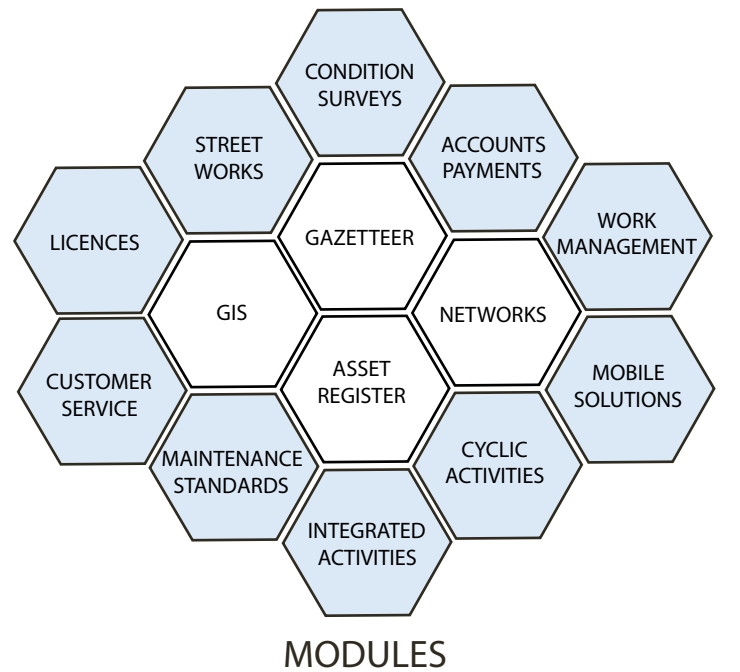

Additional Object fields for storing multimedia files

Insight comprises a range of highly integrated modules that can be used in various combinations, to provide individual solutions for the areas shown on the diagram in beige.

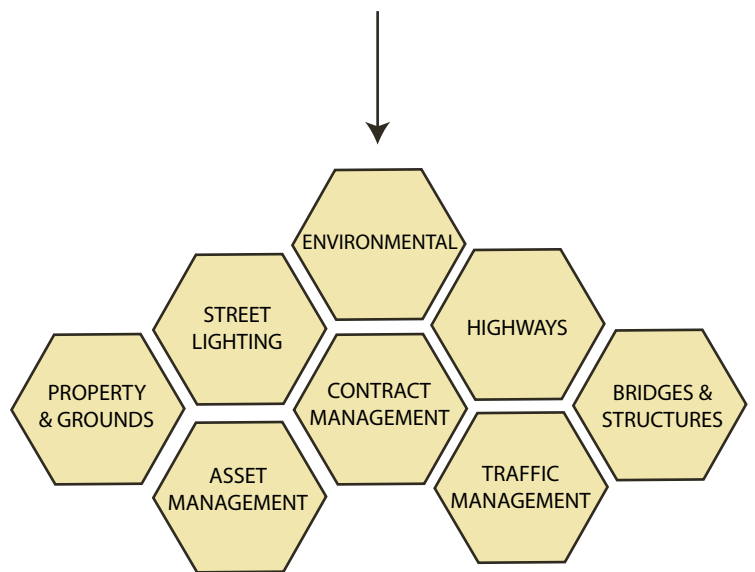

In total, the system provides the capability to manage ALL of these solution areas as part of a single integrated system.

This offers the opportunity for cost and efficiency savings (in line with the Gershon review), by streamlining operational practices and reducing the number of systems used to manage these areas.

Further savings can also be realised since only one set of interfaces are required to be established and maintained with external and corporate systems.
